Note: All of the above components are available in the eight standard colours detailed below and painted Golden Oak.

Controls

Electrically operated window shutters are powered by class leading **EURODRIVE** Tubular Motors, which offer unparalleled reliability and performance within the roller shutter industry. There are many control options where electrically operated shutters are selected, from a simple single shutter controlled by one wall mounted switch right through to groups of shutters operating simultaneously by hand held remote control.

Where electric operation is not available, we offer a manual version that utilises a spring within the canopy box to assist with lifting and also a key operated bottom rail lock and grab handles.

Approved Installer

Please note some marking may occur at the top of the concave side of the door over time. This is unavoidable and due to the rolling nature of the product and locking mechanism.
